HOW TO OPERATE A SOFT-CLOSE SLIDING (BARN) DOOR

This Sliding (Barn) Door has a soft-close mechanism and is designed to slowly open or close the door when it reaches the final 2-3 in. along the track. Follow the steps below to properly operate the door and ensure product longevity.

To open:

- 01.** Grab the middle of the door handle and gently pull the door open.

- 02.** Once the door is halfway open, let go of the handle and allow the door's momentum to open it the rest of the way. The mechanism will engage at the last 2-3 in. and slowly dock the door open.

To close:

- 01.** Grasp the middle of the door handle and gently push the door closed.

- 02.** Once the door is $\frac{3}{4}$ closed, let go of the handle and the mechanism will engage to softly close the door on its own.

NOTE: Avoid assisting or forcing the door to open or close faster when the soft-close mechanism is engaged. DO NOT slam the door, slamming it can cause the mechanism to break.
